

CSI142 Object-Oriented Programming

Week 1, Lecture 1: Course Introduction and Java Recap Kickoff

Monday, 26 Jan 2026 • 08:00-09:00 • Room 252-008 • Semester II 2025/26

CSI141 (Procedural Java)

Variables, operators, selection,
Loops

Arrays and simple methods

Solve problems step-by-step

CSI142 (Object-Oriented Java)

Design with classes and objects

Build reusable, maintainable code

Work with collections, generics,
exceptions, recursion

Today's plan

CSI142 • Sem II 2025/26

- Course logistics: schedule, staff, labs
- Learning outcomes and what you will build
- Assessment and how to succeed
- Tools and setup checklist
- Java recap warm-up (program structure, compile/run)

Course logistics (quick reference)

CSI142 • Sem II 2025/26

Item	Details
Course numbers (registration)	3181 and 3460
Lectures	Mon/Wed/Fri 08:00-09:00, Room 252-008
Labs (choose one)	Tue 09:00-12:00 OR 12:00-15:00 OR 15:00-18:00, Rooms 247-295/296/297
Lecturers	Dr. Cleverence Kombe, Dr. Moemedi Lefoane
Email	kombec@ub.ac.bw, lefoanem@ub.ac.bw
Teaching Assistants	TBA (announced on Moodle)
Course site	Moodle (official announcements and submissions)

Knowledge (you can explain)

- Encapsulation, inheritance, polymorphism, composition
- How Java uses classes, interfaces, libraries

Skills (you can do)

- Design and implement OOP solutions in Java
- Use generics and collections safely
- Handle exceptions, use recursion, analyse performance

Component	Weight
Lab assignments	17%
Lab tests (3)	12%
Test 1	8%
Test 2	8%
Participation	5%
Final examination	50%

- Arrive on time, laptop ready
- Ask questions, and also try answering peers' questions
- Do the short in-class checks (quizzes, mini tasks)
- Bring code attempts to consultations, not only screenshots of errors
- Respect academic integrity: learn together, submit your own work

Tooling checklist for Week 1

CSI142 • Sem II 2025/26

- Install Java 17 JDK (verify: `java -version`)
- VS Code + Java extensions, or IntelliJ (if you prefer)
- Git (basic: clone, commit, push)
- Know where your files are: folder per lab and assignment
- Moodle access confirmed (you can view CSI142 page)

```
public class HelloCSI142 {  
    public static void main(String[] args) {  
        System.out.println("Hello, CSI142!");  
    }  
}
```

- One public class per file, file name must match the public class
- Program starts in main, the JVM calls it
- System.out.println prints a line to the console

How your Java code becomes a running program

Warm-up: predict the output

CSI142 • Sem II 2025/26

```
int a = 7;  
int b = 2;  
System.out.println(a / b);  
System.out.println(a / (double) b);  
System.out.println("7" + 2 + 1);
```

Your guess

- A) 3, 3.5, 721
- B) 3, 3.5, 9
- C) 3, 3.0, 721
- D) 3, 3.5, 10

Discuss with a neighbour for 60 seconds.

Then we vote.

Big picture of the semester

Weeks 1-3
Java foundations

Weeks 4-7
OOP core

Weeks 9-13
Advanced topics

Weeks 14-15
Review + tests

Week 1 plan

CSI142 • Sem II 2025/26

- Mon: course introduction, Java warm-up (today)
- Tue: Lab 1, environment check, I/O and loop exercises
- Wed: Java recap, I/O patterns, control flow and debugging
- Fri: short knowledge check, switch and do-while teaser, OOP preview
- By next Monday: be comfortable compiling and running Java, and reading errors

Exit ticket and next steps

CSI142 • Sem II 2025/26

- Confirm you can: compile, run, and edit a Java program
- Bring one question to Wednesday (conceptual or technical)
- Lab preparation: create a folder for CSI142 and a simple Git repo
- Optional reading: Java for Everyone, quick review of Chapters 1-2
